Single-channels and multichannels amplifiers:

- TV single-channel amplifiers, Z input de-multiplexing and Z output multiplexing. Adjacent channel operation allowed in UHF band.
- FM Radio and DAB Amplifiers.
- It is advisable to place the amplifiers on the base-plate following an increasing order of number of channel (frequency). The RF output of the headend will be taken from the last one of the modules ordered in this way.
- Especially created for amplification of combined analog and digital channels.
- Output voltage +24 VDC is automatically connected to the RF modules through a connecting bar at the base-plate.
- Toolless mounting.

SAT-IF Combiner/Amplifier:

- 1 Satellite input 950-2150 MHz with adjustable gain and sloped response to compensate for cable loss; 1 terrestrial coupling input 5-862 MHz; 1 satellite+terrestrial output
- Automatic power connection, either via contact terminal.
- LNB coax line powering. The SZB-190 generates the required voltage/tone signals for the selection of H/V polarisation and high/low frequency sub-band. Programmable values by micro-switches.

Power supply:

- Electrical safety protection level: Class II. Mains lead with bipolar plug.
- Output voltage is additionally available from two auxiliar jacks, for connection to one or two power inserters (mast-head amplifier remote powering). Banana jumper supplied.

* SZB-148 high selectivity. Amplification of one analog or digital UHF channel, either non-adjacent or adjacent.

Each amplifier is packed with 1 Z bridge Ref. 2247

1 Also 1 channel S3 to S18.

2 Also 1 channel S19 to S38.

3 Adjustable -20 dB (-30 dB in SZB-148). Interstage attenuator in all models —maintenance of low noise figure—.

4 Subtract 3.5 dB if Z input demultiplexing is used.

Particular ordering instruction: Specify the TV channel for single-channel amplifiers.
